Student Management using lists in C

in the context of a project in the course C Programming of Harokopio University of Athens

DESCRIPTION

Through this project someone can create a new student, delete someone who already exists, update student's details, see the details of a specific student, as well as see all the students it has. In the end, when the user presses exit, the students are saved in a file that he has given to us.

This project, therefore, was implemented as part of a project in the programming lesson and this language was used because it was requested by the teacher.
